TEMPLATE · STORY MAPPING

Story Mapping Process

Story mapping visualises the user journey, organises work around user value, and plans incremental releases.

STEP	WHAT YOU DO	OUTCOME
1. Frame	Define the product or feature by answering: What? Who? Why?	Shared understanding of the goal and the users.
2. Map	Identify the key user types and their high-level activities (the backbone).	An end-to-end user journey.
3. Explore	Break activities into tasks, and discuss variations, exceptions and alternative paths. Involve different perspectives.	Detailed user tasks.
4. Slice	Group stories into incremental releases that each deliver value. Define goals and success measures for each release.	A product roadmap with viable releases.
5. Plan	Deliver incrementally: walking skeleton, then expand functionality, then polish and refine.	A development strategy for continuous delivery.
